**DETAILED ACTION**

***Response to Amendment***

The drawing and specification objection has been withdrawn in view of applicant's response filed 09/08/03.

The allowable subject matter has been withdrawn in view of the new found art.

Claims 31-38 have been withdrawn in view of the restriction/ election in paper number 7 and the response to the non-elected figures as communicated by applicant in paper no. 8.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims **1-3,6-7,15-19,21-22,27-30** are rejected under 35 U.S.C. 102(b) as being anticipated by Villani (U.S. Patent No. 5,848,949).

Villani discloses an implantable access device having a plate(s), at least two walls in the broadest interpretation. See figs. 1-9. The walls being any of the 4 walls (on either side of 37 are at least 2 walls depending on the interpretation). The valve assembly is considered to be the septum which is capable of performing the function as claimed. It is normally closed until it has been pierced by a filament. The shape of the plate and the distance between the walls are decreasing monotonically.

FIG. 6

**Claim Rejections - 35 USC § 103**

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 14,26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Villani (U.S. Patent No. 5,848,989) in view of Fenton, Jr. (U.S. Patent No. 5,178,612).

Villani discloses the invention as substantially claimed. Villani teaches holes 39 for securing by suturing. However, Villani does not teach at least one wing extending outward from the port adapted to receive a fastener. Fenton, Jr. discloses a

Art Unit: 3763

wing with suture holes (40) in the analogous art of implantable ports. It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the extended area beyond the port walls with suture holes as taught by Fenton, Jr. in order to provide securement of the implantable port to a desired surface.

### ***Response to Arguments***

Applicant's arguments with respect to claims 17-19,21-22,26-30 have been considered but are moot in view of the new ground(s) of rejection.

### ***Allowable Subject Matter***

Claims 4-5,8,10,31-32 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

### ***Conclusion***
